NAME: JUNNU BHAKTHI YADAV

BATCH: 38

Task 1: AI-Assisted Personal Portfolio Website

Scenario

A student wants to showcase academic projects, technical skills, and contact information through a personal portfolio website. AI tools are used to speed up development while maintaining quality and customization.

Tasks

1. Use GitHub Copilot to generate a semantic HTML structure with

sections:

- o Home**
- o About**
- o Projects**
- o Contact**

2. Ask Copilot to suggest responsive CSS using Flexbox or Grid.

3. Customize AI-generated CSS to add:

- o Hover effects on project cards**
- o Smooth scrolling navigation**

Expected Outcome

- Clean and well-structured portfolio website**
- Responsive layout for desktop and mobile screens**
- Interactive project cards**

PROMPT:

Create a **personal portfolio website** using **semantic HTML** with sections: Home, About, Projects, and Contact.

Make the layout **responsive using CSS Flexbox or Grid** for both desktop and mobile screens.

Add **project cards with hover effects** and implement **smooth scrolling navigation**.

CODE:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Personal Portfolio</title>
  <style>
    /* Basic Reset */
    * {
      margin: 0;
      padding: 0;
      box-sizing: border-box;
    }

    body {
      font-family: Arial, sans-serif;
      line-height: 1.6;
      background-color: #f4f4f4;
    }

    header {
      background-color: #333;
      color: #fff;
      padding: 1rem 0;
      text-align: center;
    }

    nav ul {
      list-style: none;
```

```
        display: flex;
        justify-content: center;
    }

    nav ul li {
        margin: 0 15px;
    }

    nav ul li a {
        color: #fff;
        text-decoration: none;
        font-size: 1.2rem;
    }

    section {
        padding: 2rem;
        max-width: 1200px;
        margin: auto;
    }

    .projects {
        display: grid;
        grid-template-columns: repeat(auto-fit, minmax(300px, 1fr));
        gap: 20px;
    }

    .project-card {
        background-color: #fff;
        padding: 1rem;
        border-radius: 5px;
        box-shadow: 0 2px 5px rgba(0,0,0,0.1);
        transition: transform 0.3s ease, box-shadow 0.3s ease;
    }

    .project-card:hover {
        transform: translateY(-10px);
        box-shadow: 0 4px 10px rgba(0,0,0,0.2);
    }

    footer {
```

```
        background-color: #333;
        color: #fff;
        text-align: center;
        padding: 1rem 0;
    }
</style>
</head>
<body>
    <header>
        <h1>John Doe's Portfolio</h1>
        <nav>
            <ul>
                <li><a href="#home">Home</a></li>
                <li><a href="#about">About</a></li>
                <li><a href="#projects">Projects</a></li>
                <li><a href="#contact">Contact</a></li>
            </ul>
        </nav>
    </header>

    <section id="home">
        <h2>Welcome to My Portfolio</h2>
        <p>This is a showcase of my academic projects, technical skills,
and contact information.</p>
    </section>

    <section id="about">
        <h2>About Me</h2>
        <p>I am a passionate student with a keen interest in web
development and AI technologies. I have worked on various projects that
demonstrate my skills and creativity.</p>
    </section>

    <section id="projects">
        <h2>Projects</h2>
        <div class="projects">
            <div class="project-card">
                <h3>Project One</h3>
                <p>A web application that allows users to track their
fitness goals.</p>
            </div>
        </div>
    </section>
</body>
</html>
```

```

        </div>
        <div class="project-card">
            <h3>Project Two</h3>
            <p>An AI-powered chatbot that provides customer support
for e-commerce websites.</p>
        </div>
        <!-- Add more project cards as needed -->
    </div>
</section>

<section id="contact">
    <h2>Contact Me</h2>
    <p>You can reach me at john.doe@example.com</p>
</section>

<footer>
    <p>&copy; 2023 John Doe. All rights reserved.</p>
</footer>
</body>
</html>

```

OUTPUT:

Justification:

1. Use of Semantic HTML

The code uses structured sections such as **header**, **nav**, **section**, and **footer**, which improves readability, accessibility, and SEO. This makes the website easier to maintain and understand.

2. Responsive Design

The **CSS Grid layout in the projects section** (`grid-template-columns: repeat(auto-fit, minmax(300px, 1fr))`) automatically adjusts the number of project cards based on screen size, ensuring the website works well on both desktop and mobile devices.

3. Interactive User Experience

The **hover effect on project cards** using `transform` and `box-shadow` creates visual feedback for users, making the interface more interactive and engaging.

4. Easy Navigation

The navigation bar links (`#home`, `#about`, `#projects`, `#contact`) allow users to quickly move between sections of the webpage, improving usability.

5. Clean and Maintainable Styling

The CSS includes a **basic reset and organized styling**, which ensures consistent layout across browsers and keeps the design simple and professional.

Task 2: AI-Generated Restaurant Landing Page

Scenario

A local restaurant requires a simple yet attractive landing page to display its

offerings. The developer uses AI assistance to rapidly generate UI components.

Tasks

1. Use Copilot to create a navigation bar with links:

- o Home
- o Menu
- o Gallery
- o Contact

2. Generate a menu section styled with CSS cards.

3. Implement a JavaScript-based image slider for the gallery using Copilot

suggestions.

4. Customize animations or transitions for better user experience.

Expected Outcome

- Fully functional restaurant landing page
- Responsive navigation bar
- Working image slider with smooth transitions

PROMPT:

Create a restaurant landing page with a navigation bar (Home, Menu, Gallery, Contact) using HTML, CSS, and JavaScript.

Add a menu section with CSS card design and make the layout responsive.

Implement a JavaScript image slider for the gallery with smooth animations and transitions.

CODE:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Restaurant Landing Page</title>

  <style>

    /* Basic Reset */

    * {

      margin: 0;

      padding: 0;

      box-sizing: border-box;

    }

    body {

      font-family: 'Arial', sans-serif;

      background-color: #fff8f0;

    }

    header {

      background-color: #d35400;

      color: #fff;
```

```
padding: 1rem 0;

text-align: center;

}

nav ul {

list-style: none;

display: flex;

justify-content: center;

}

nav ul li {

margin: 0 15px;

}

nav ul li a {

color: #fff;

text-decoration: none;

font-size: 1.2rem;

}

section {

padding: 2rem;

max-width: 1200px;
```

```
        margin: auto;

    }

    .menu-cards {

        display: grid;

        grid-template-columns: repeat(auto-fit, minmax(300px, 1fr));

        gap: 20px;

    }

    .menu-card {

        background-color: #fff;

        padding: 1rem;

        border-radius: 5px;

        box-shadow: 0 2px 5px rgba(0,0,0,0.1);

    }

    .slider {

        position: relative;

        width: 100%;

        max-width: 800px;

        margin: auto;

        overflow: hidden;

    }
```

```
.slides {  
  
    display: flex;  
  
    transition: transform 0.5s ease-in-out;  
  
}  
  
.slide {  
  
    min-width: 100%;  
  
}  
  
footer {  
  
    background-color: #d35400;  
  
    color: #fff;  
  
    text-align: center;  
  
    padding: 1rem 0;  
  
}  
  
</style>  
</head>  
<body>  
  
    <header>  
  
        <h1>Delicious Bites Restaurant</h1>  
  
        <nav>  
  
            <ul>
```

```
        <li><a href="#home">Home</a></li>

        <li><a href="#menu">Menu</a></li>

        <li><a href="#gallery">Gallery</a></li>

        <li><a href="#contact">Contact</a></li>

    </ul>

</nav>

</header>

<section id="home">

    <h2>Welcome to Delicious Bites</h2>

    <p>Experience the best culinary delights in town. Our menu is
crafted with love and passion to satisfy your taste buds.</p>

</section>

<section id="menu">

    <h2>Our Menu</h2>

    <div class="menu-cards">

        <div class="menu-card">

            <h3>Grilled Chicken</h3>

            <p>Juicy grilled chicken served with a side of
vegetables.</p>

        </div>

        <div class="menu-card">

            <h3>Vegan Salad</h3>
```

```

        <p>A fresh mix of greens, nuts, and fruits for a healthy
meal.</p>

    </div>

    <!-- Add more menu cards as needed -->

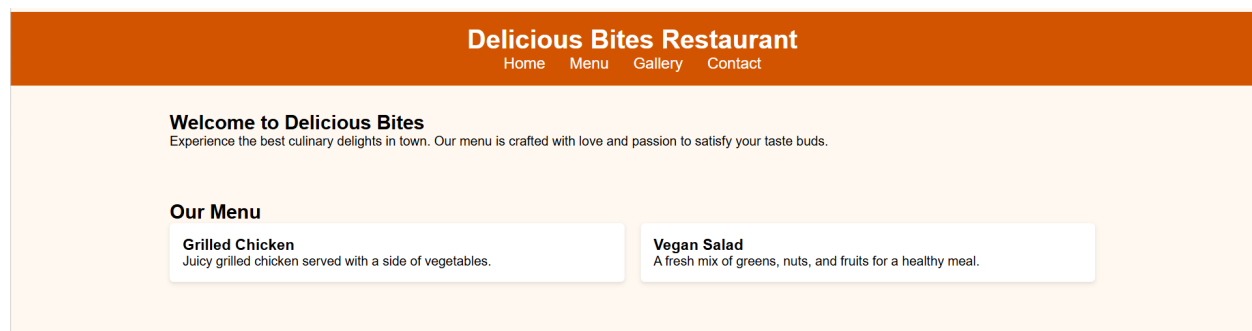

</div>

</section>

</html>

```

OUTPUT:

JUSTIFICATION:

The restaurant landing page is designed to provide a simple and attractive interface for users. The responsive navigation bar with links such as Home, Menu, Gallery, and Contact allows users to easily move between different sections of the website. The menu section is displayed using CSS cards, which organize food items in a clear and visually appealing way. The JavaScript-based image slider in the gallery helps showcase images of food and the restaurant environment dynamically. Additionally, smooth animations and transitions improve the user experience and make the webpage look more interactive and professional.

Task 3: AI-Powered Event Registration Form

Scenario

SR University is hosting a technical fest and requires an online registration form

with real-time validation to ensure accurate user input.

Tasks

1. Ask Copilot to generate an HTML form with the following fields:

- o Name**
- o Email**
- o Phone Number**
- o Department**
- o Event Selection**

2. Use AI assistance to style the form using CSS for readability and accessibility.

3. Implement JavaScript validation using Copilot:

- o Email format validation**
- o Phone number length validation**
- o Required field checks**

Expected Outcome

- User-friendly and visually appealing form**
- Real-time validation messages**
- Prevention of invalid submissions**

PROMPT:

Create an event registration form using HTML, CSS, and JavaScript with fields: Name, Email, Phone Number, Department, and Event Selection.

Style the form with CSS for good readability and accessibility.

Add JavaScript validation for email format, phone number length, and required fields with real-time error messages.

CODE:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>SR University - Event Registration Form</title>

  <style>

    /* ===== Basic Reset & Global Styles ===== */

    * {

      margin: 0;

      padding: 0;

      box-sizing: border-box;

    }

    html {
```

```
        scroll-behavior: smooth;

    }

    body {

OUTPUT:

SR University Technical Fest - Register for exciting events

Full Name *

Email Address *

Phone Number *

Department *

-- Select Your Department --

Event Selection *

-- Select an Event --

Register Now

Justification

The event registration form ensures that participants provide correct and complete information before submission. HTML is used to structure the form fields, while CSS improves readability and makes the form visually appealing and user-friendly. JavaScript validation

checks the email format, phone number length, and required fields in real time, preventing invalid data from being submitted and ensuring accurate registration details for the event.

Task 4: AI-Assisted E-Commerce Product Page

Scenario

A startup is developing a basic e-commerce product page to showcase products

and manage simple cart functionality.

Tasks

1. Use Copilot to generate a grid-based product catalog using HTML and

CSS.

2. Implement an “Add to Cart” feature using JavaScript.

3. Modify AI-generated code to include:

- o Cart item counter at the top-right corner**
- o Visual feedback when a product is added**

Expected Outcome

- Functional product catalog**
- Working cart counter**
- Interactive user experience**

PROMPT:

Create a simple e-commerce product page using HTML, CSS Grid, and JavaScript to display products in a grid layout.

Add an “Add to Cart” button for each product with JavaScript functionality.

Include a cart item counter at the top-right corner and visual feedback when a product is added.

CODE:

```

```

OUTPUT:

Justification:

The e-commerce product page helps display products in an organized grid layout using HTML and CSS. The JavaScript-based “Add to Cart” feature allows users to select products easily. The cart item counter updates dynamically to show the number of items added, while visual feedback confirms the action, improving the overall user experience and interactivity of the page.

Task 5: Create a Responsive Web Page Layout

Instructions:

- Design a basic web page layout with a header, main content area, and footer using HTML and CSS.
- Use AI to assist in generating responsive CSS for different screen sizes.
- Ensure the layout is clean and visually organized.

Expected Output:

- A responsive web page with:
- Header with navigation links
- Main section with placeholder text/images
- Footer with copyright or contact info
- Layout adapts correctly to desktop, tablet, and mobile screen sizes

PROMPT:

CODE:

```

OUTPUT:

Justification

This task demonstrates how a basic web page layout can be structured using HTML and styled with CSS. The header provides navigation links for easy access to different sections, while the main content area displays information or images. The footer contains copyright or contact details. Responsive CSS ensures that the layout adjusts properly to different screen sizes such as desktop, tablet, and mobile, providing a clean and user-friendly design.
